PERKALATE FOR BRANDS

Permissioned data: how access to customer data is changing for brands

Why the next wave of targeting runs on data customers choose to share.

The old model is fading

For years, brands reached customers with data collected quietly in the background: third-party cookies, device IDs, lists bought and sold. That model is shrinking. Browsers block more tracking, phones ask before apps follow you, and privacy rules keep tightening.

The result is familiar to anyone running ads: rising costs, fuzzier audiences, and less certainty about who you're actually reaching.

What replaces it

The data that still works best is the data customers share on purpose. People will share more when three things are true: they choose what to share, they can see why it matters, and they get something worth having in return.

Loyalty data is a strong example. Most people belong to many programs, but each program only sees its own slice. When a customer brings those accounts together and chooses what brands can use, the picture gets clearer for everyone.

How Perkalate works

- **Members connect their accounts.** They link the loyalty programs they already belong to.
- **Members choose what they share.** For example, program memberships, tier ranges or birthday month. They can turn sharing off.
- **Brands see audiences, not people.** You build an audience from opt-in signals and see totals and results, never individual identities.
- **Members get real value.** Rewards land in their Perkalate wallet next to programs like Amex, Delta and Marriott.

Why this is better for brands

It's verified. Signals come from real loyalty and spend activity that members connected, not guesses from browsing.

It's durable. Data shared with consent doesn't disappear when a browser changes its rules.

It's welcome. A reward that matches what someone actually does feels useful, not creepy.

What to do now

1. Audit which of your channels depend on tracking that's going away.
2. Pick one audience you'd love to reach but can't find today, like top-tier customers in your category who haven't tried you.
3. Test one reward aimed at that audience through a permissioned channel, and compare views, claims and redemptions with your usual campaigns.

The takeaway

Access to customer data isn't ending. It's moving from what you can collect to what customers choose to share. Brands that earn that access with useful rewards will reach better customers at lower cost.

Get started

Perkalate is free to start, and you only pay for the rewards you fund. 100+ brands are already on it.

Get early access at perkalate.com/brands.

Amex, Delta and Marriott are programs Perkalate members can connect. Perkalate is not affiliated with them. Examples are illustrations, not results from a specific brand.
